Affected
People

5.06%
Population

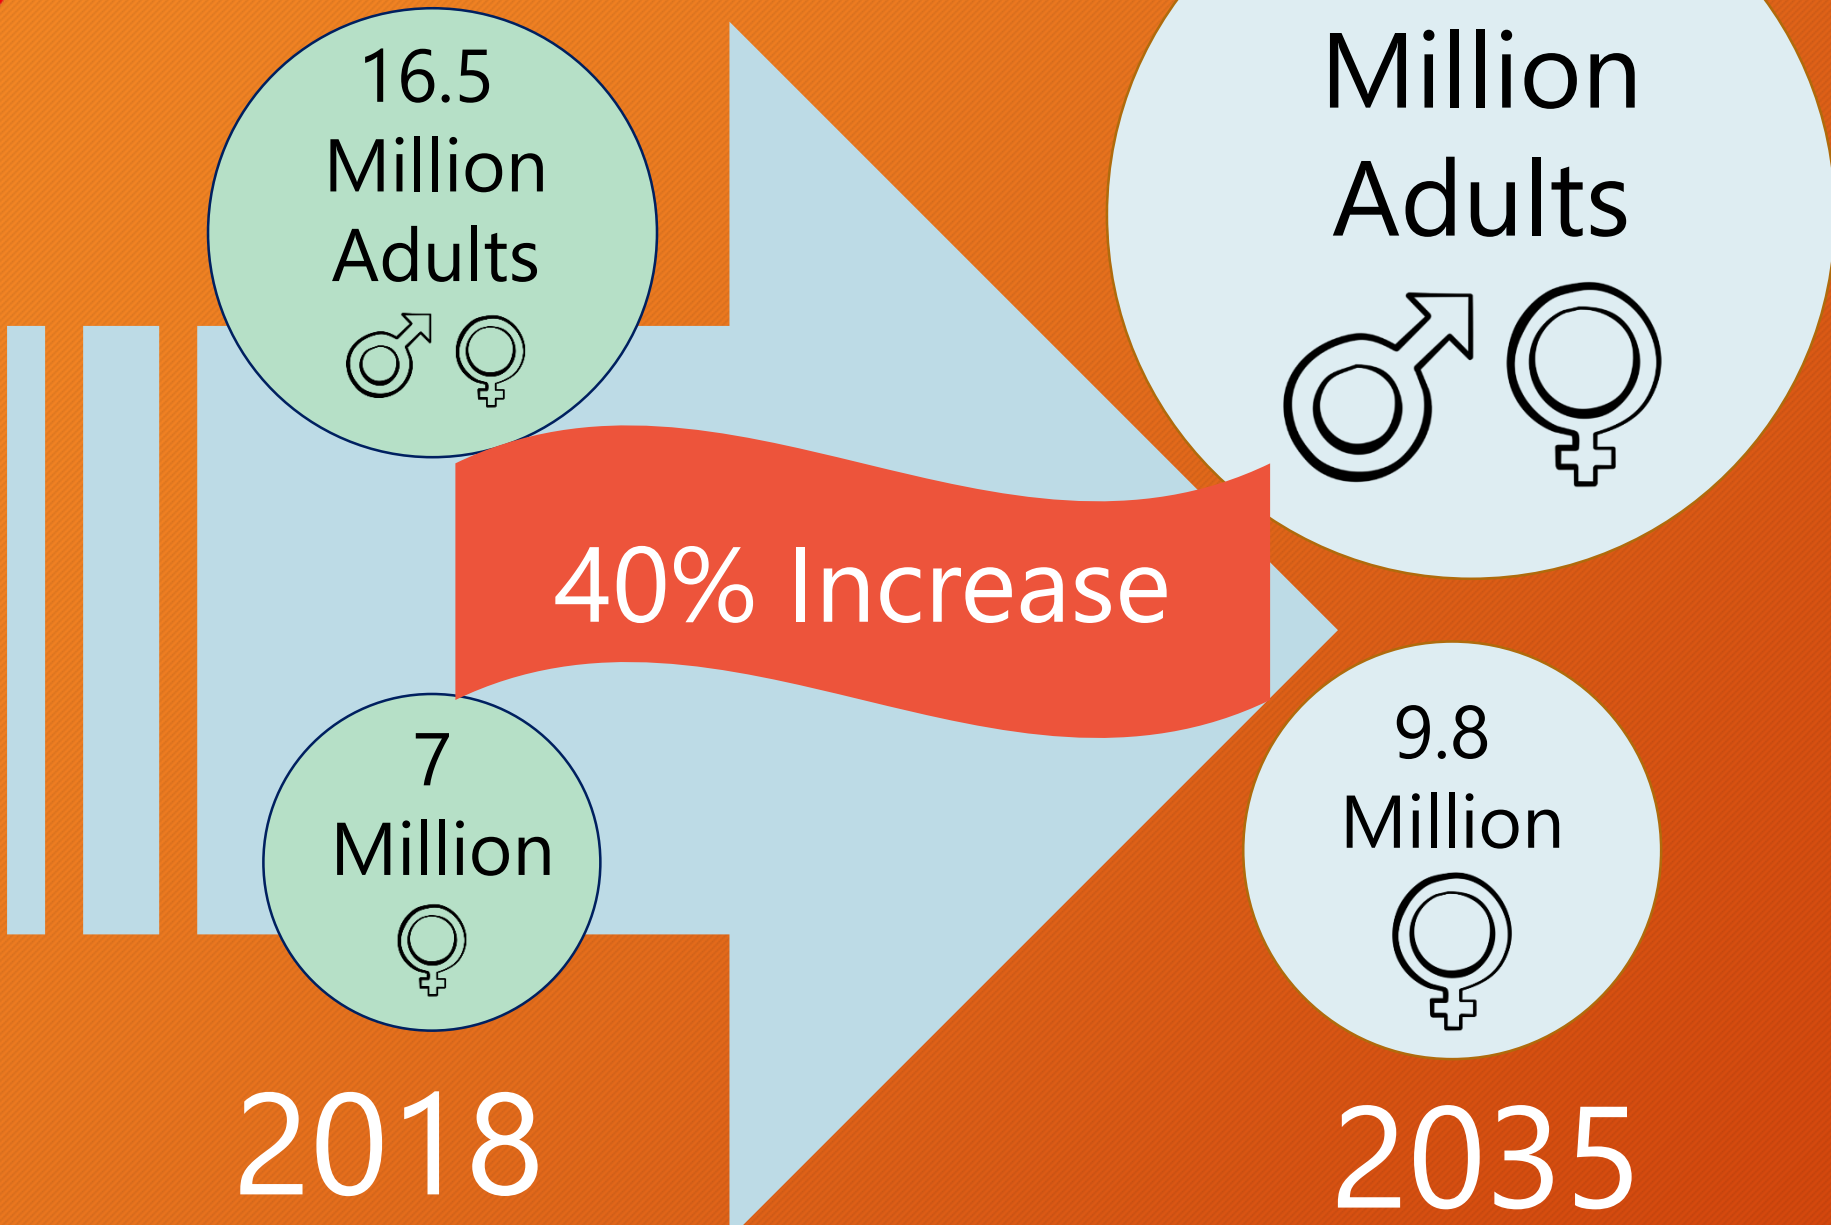

CHD
Affected

2.14%
Population

CHD Affected People

\$182
Billions

CHD Related Cost (2015)

Re-hospitalization
within 30 days to 1 year
of the cardiac event

30%
More

In Research

Undertreated
Underrepresented

Rectifying sex-specific
disparities in CHD

**National
Priority**

Current Process: CBCR

Experience a Cardiac Event 

Diagnosed with CHD 

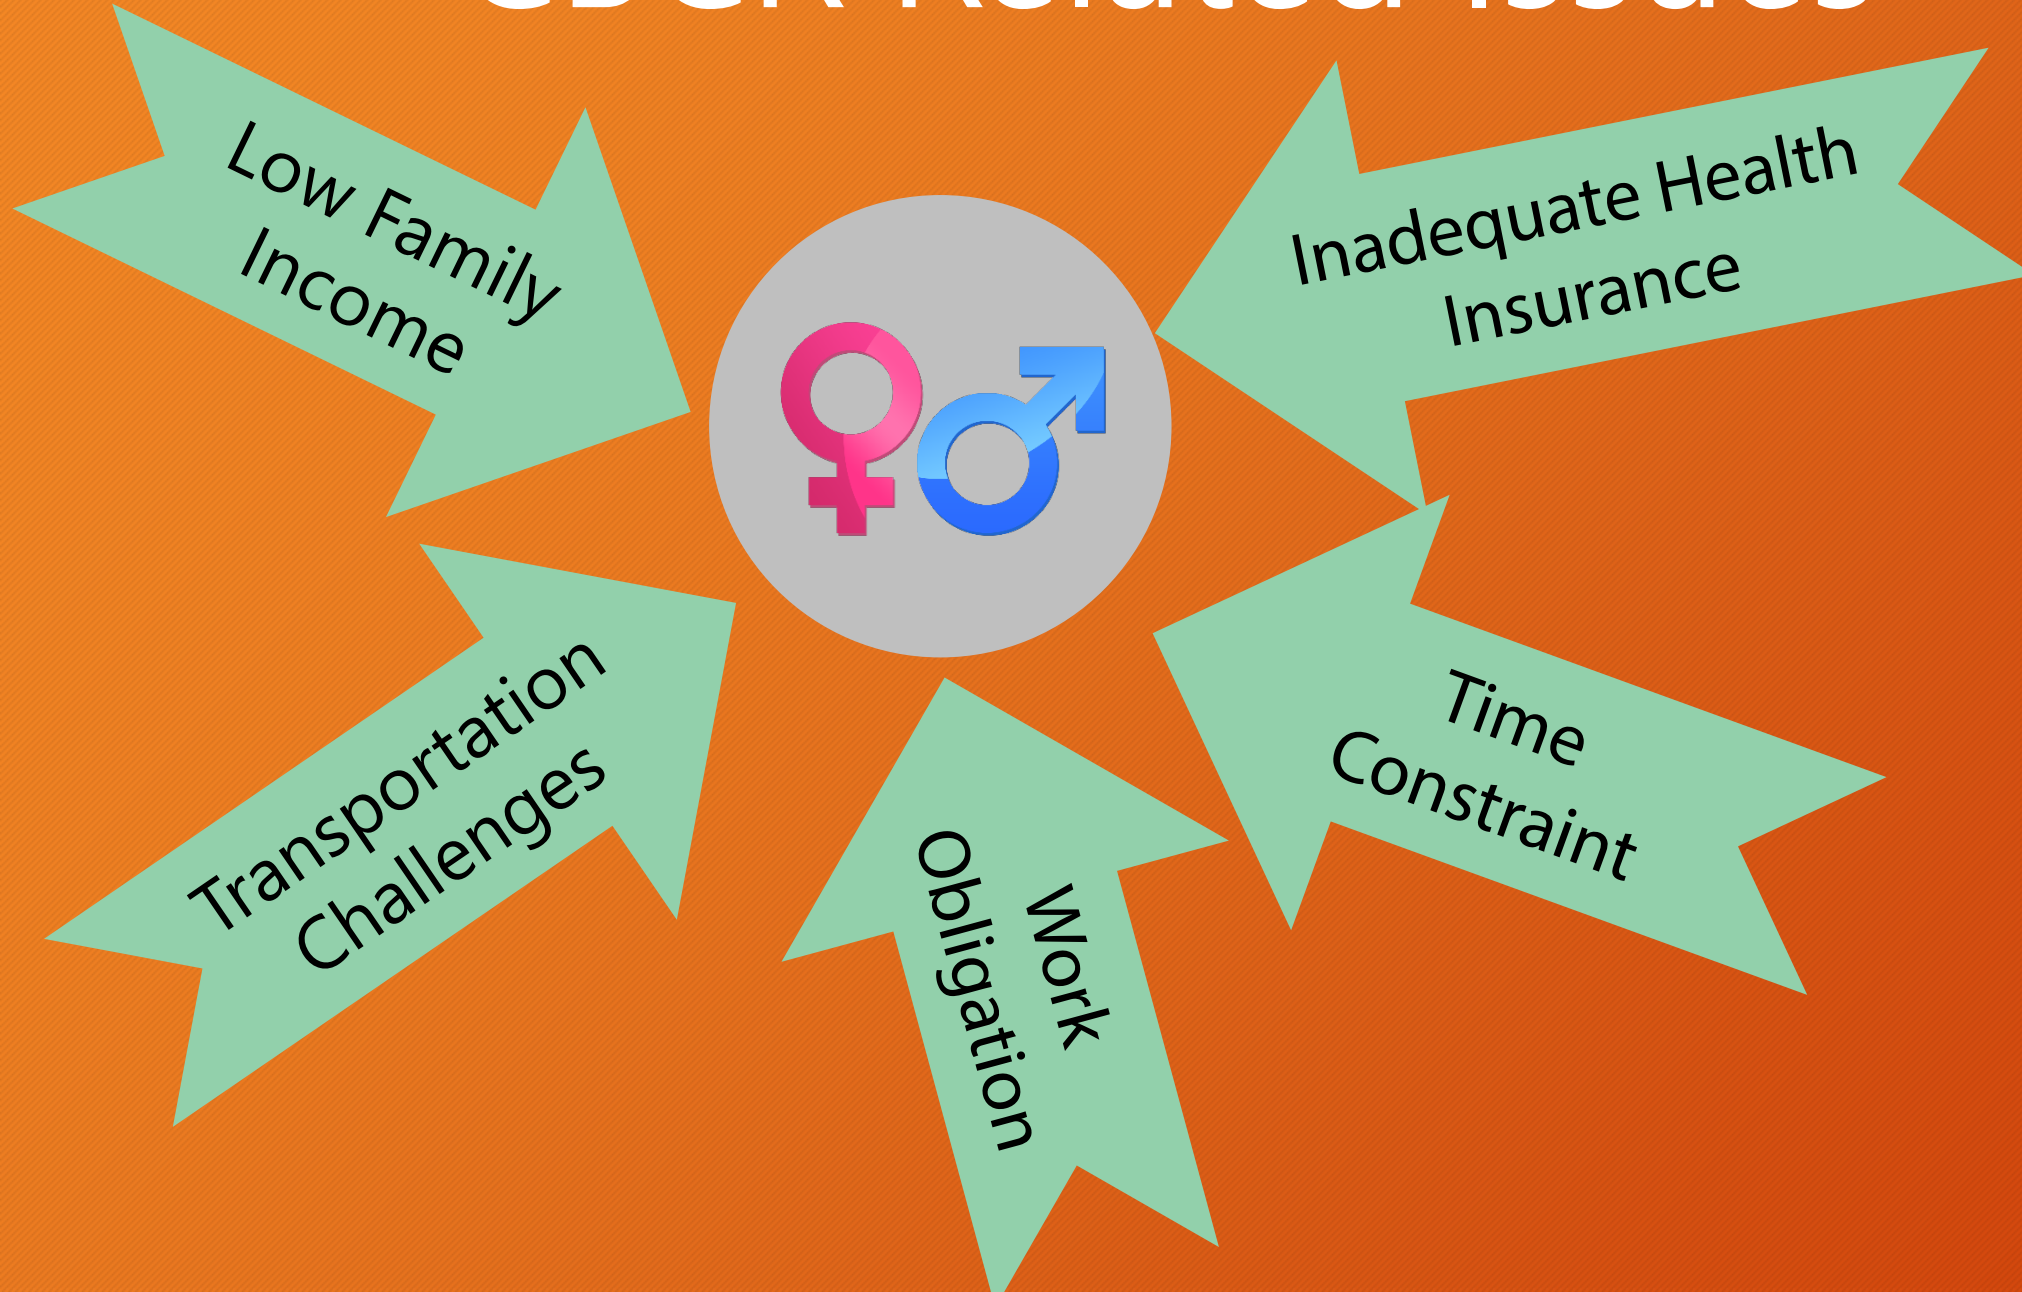

Cardiac Surgery

Center Based Cardiac Rehabilitation (CBCR)

CBCR Related Issues

CBCR Relate Issues: Women

Dislike Mixed-Gender Exercise

Find Exercise Tiring and Painful

Unmet Emotional Needs in CR

CBCR Related Issues

Limited access to CBCR

Struggle with disease self-management

Research Questions

- What is feasible and required to develop a comprehensive mHealth home-based cardiac rehabilitation (HBCR) program for women with coronary heart disease?
- What is the impact of an mHealth HBCR program for women with CHD?

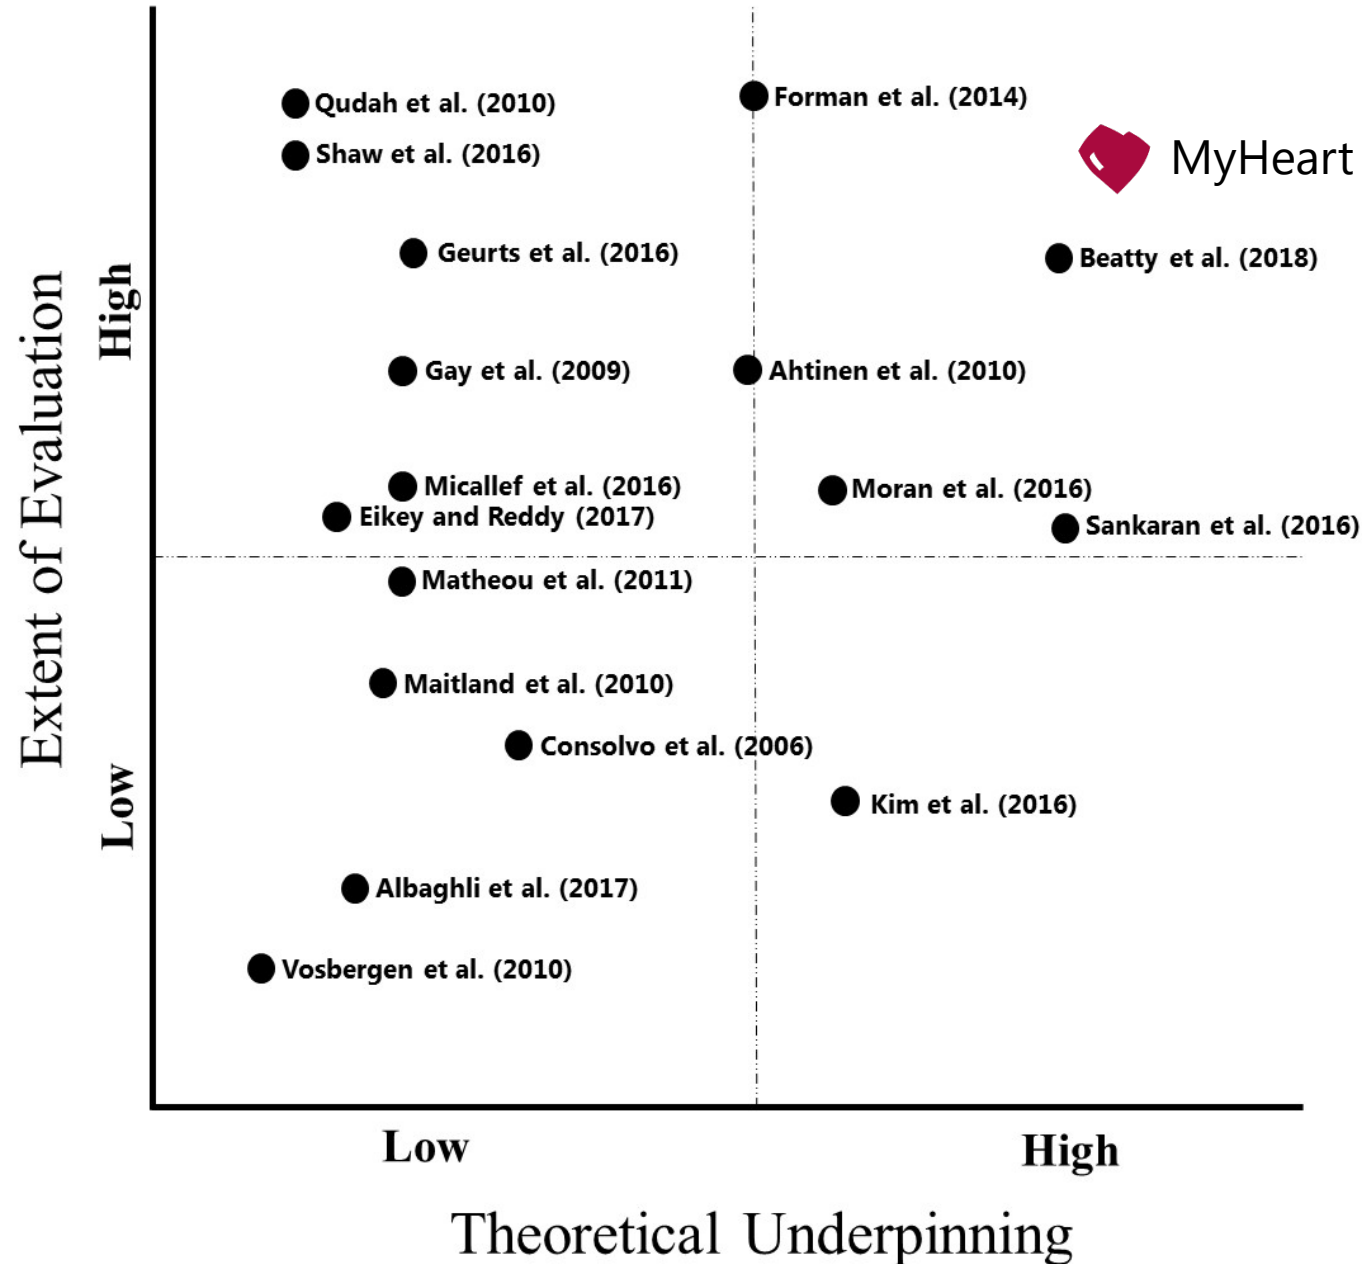

Existing Research

Existing Research

Theoretical Underpinning	extent to which the study uses single or multiple theories
Extent of Evaluation	number of different evaluation methods followed while evaluating a designed artifact

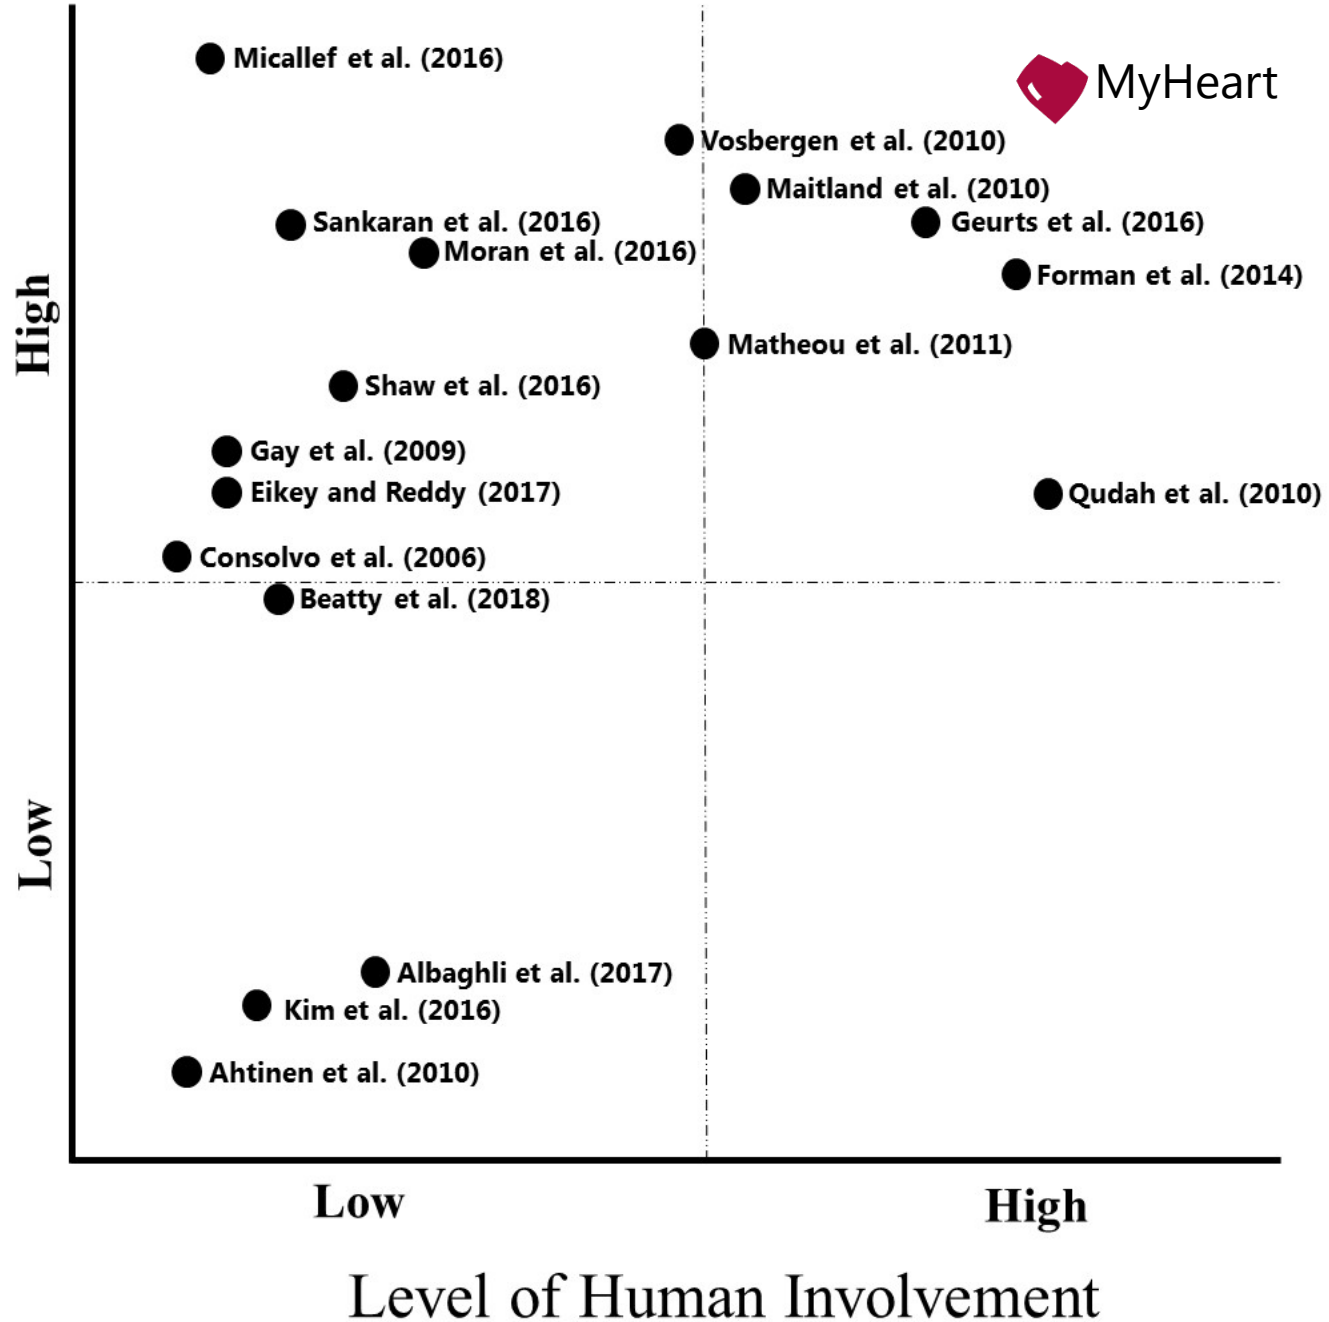

Existing Research

Level of Human Involvement	extent to which the designed artifact involve human being while performing a specific task
Specificity of Target Population	extent to which the designed solution is cater to the need of a specific population

Specificity of Target Population

MyHeart Design Characteristics

Health
Coach
needs to
be
involved

Safeguard
against
random or
systematic
malfunction

Interventions
need to be
dynamic

Identification
of
meaningful
behavioral
pattern

MyHeart Design Characteristics

Uses EMA to design interventions to target the unwarranted behavior

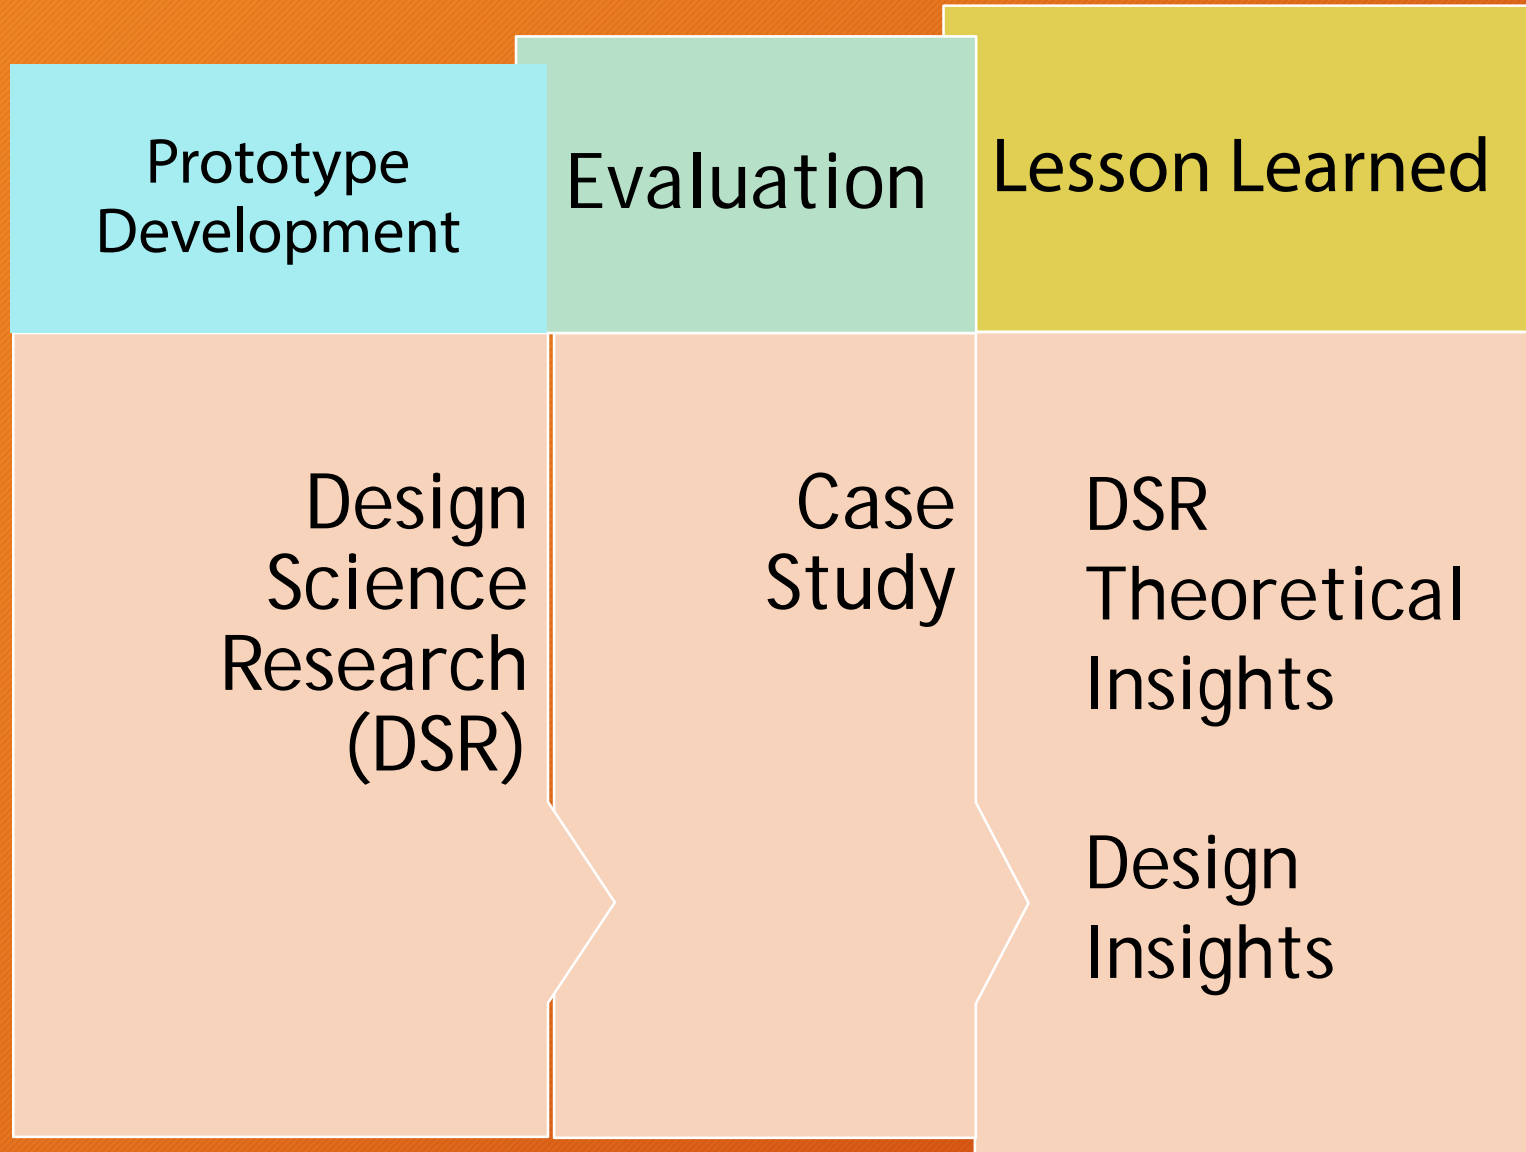

Dashboard gives unique opportunities to track both proximal and distal outcome

Research Methodology

Research Methodology

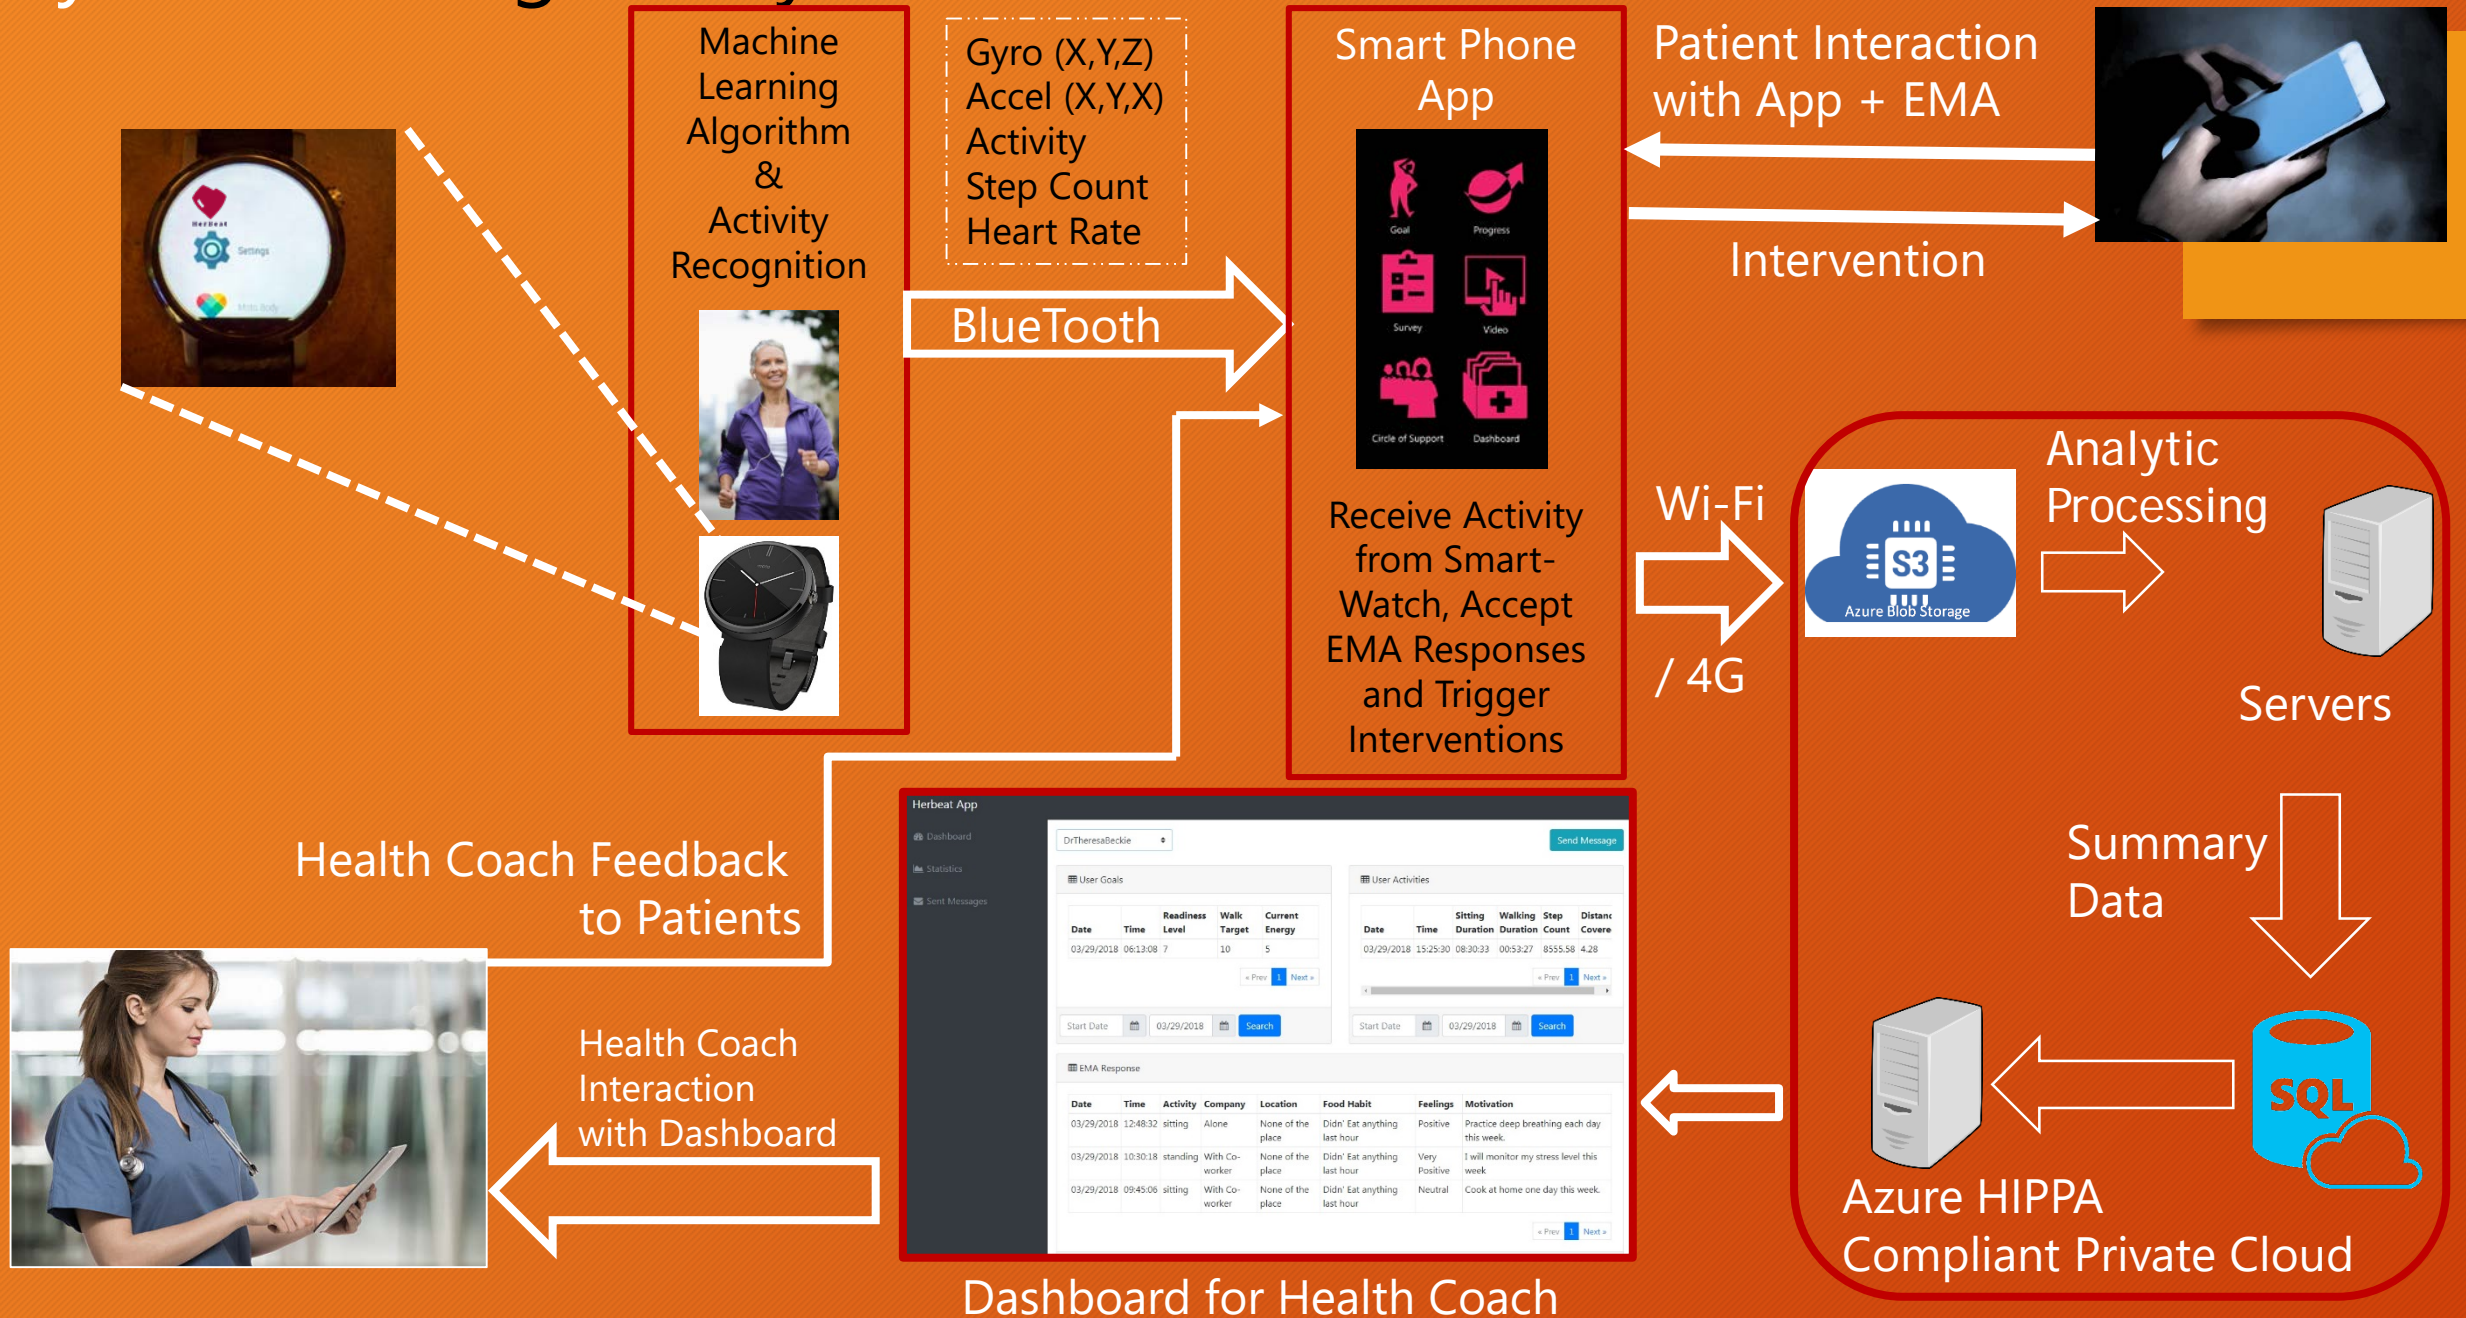

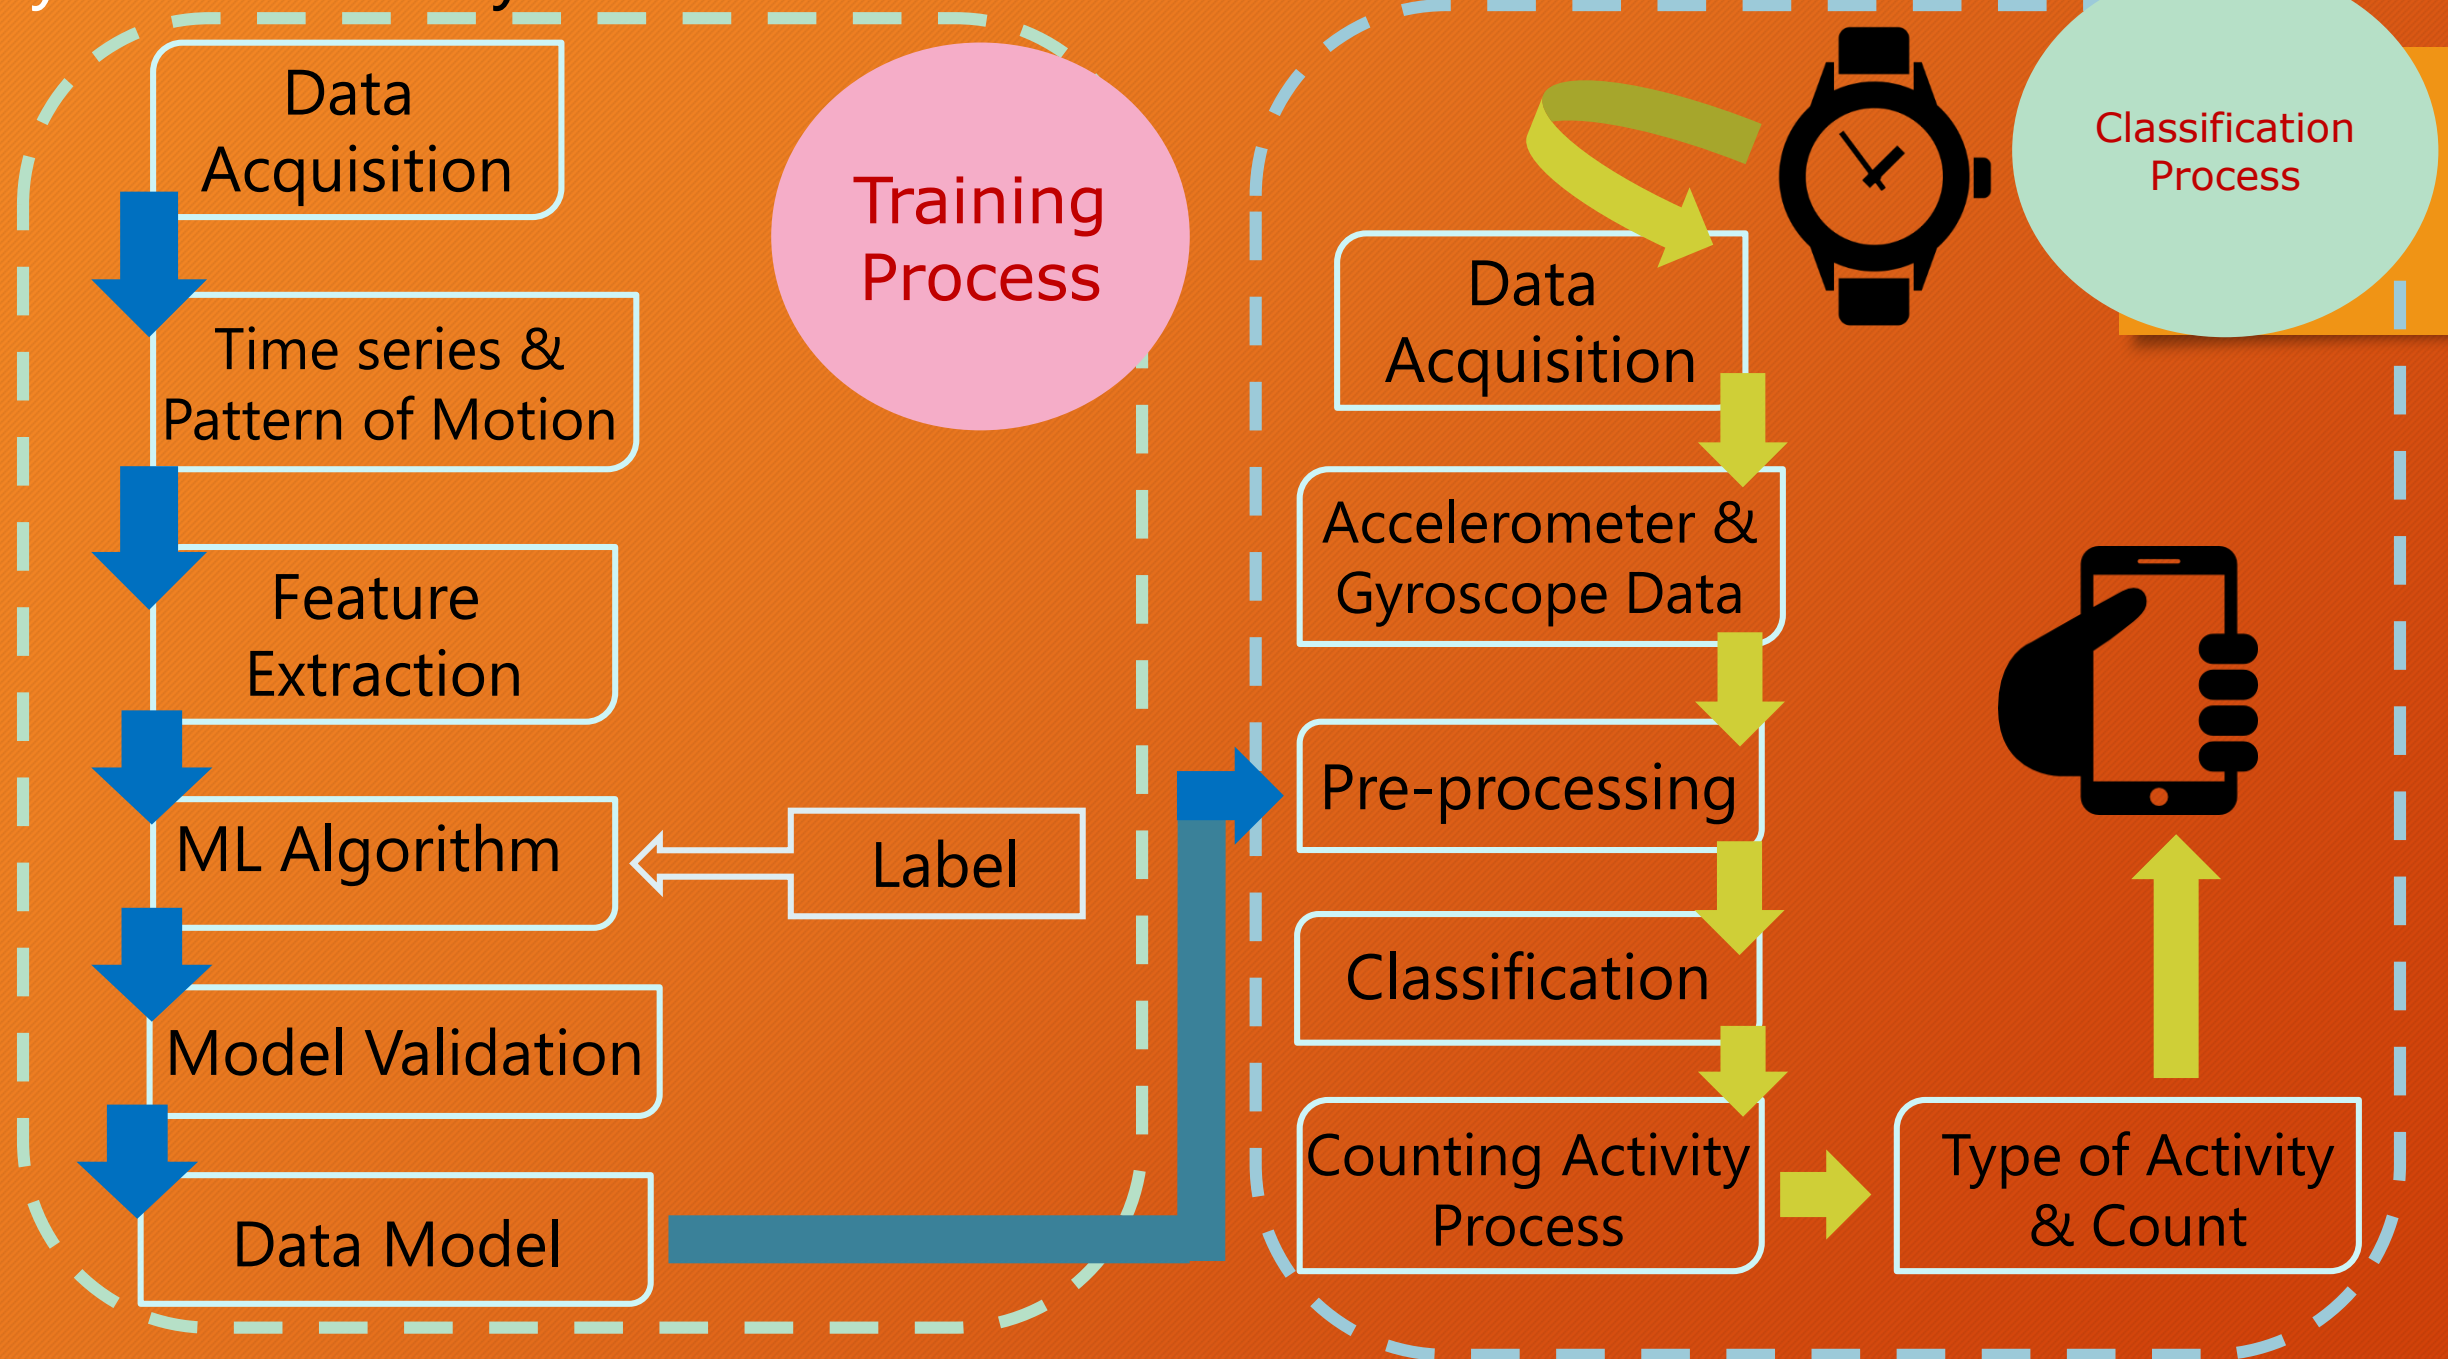

MyHeart Design

MyHeart: Design of System Architecture

MyHeart: Activity detection

MyHeart: Decision Rule System

Preprogrammed
Decision Rules

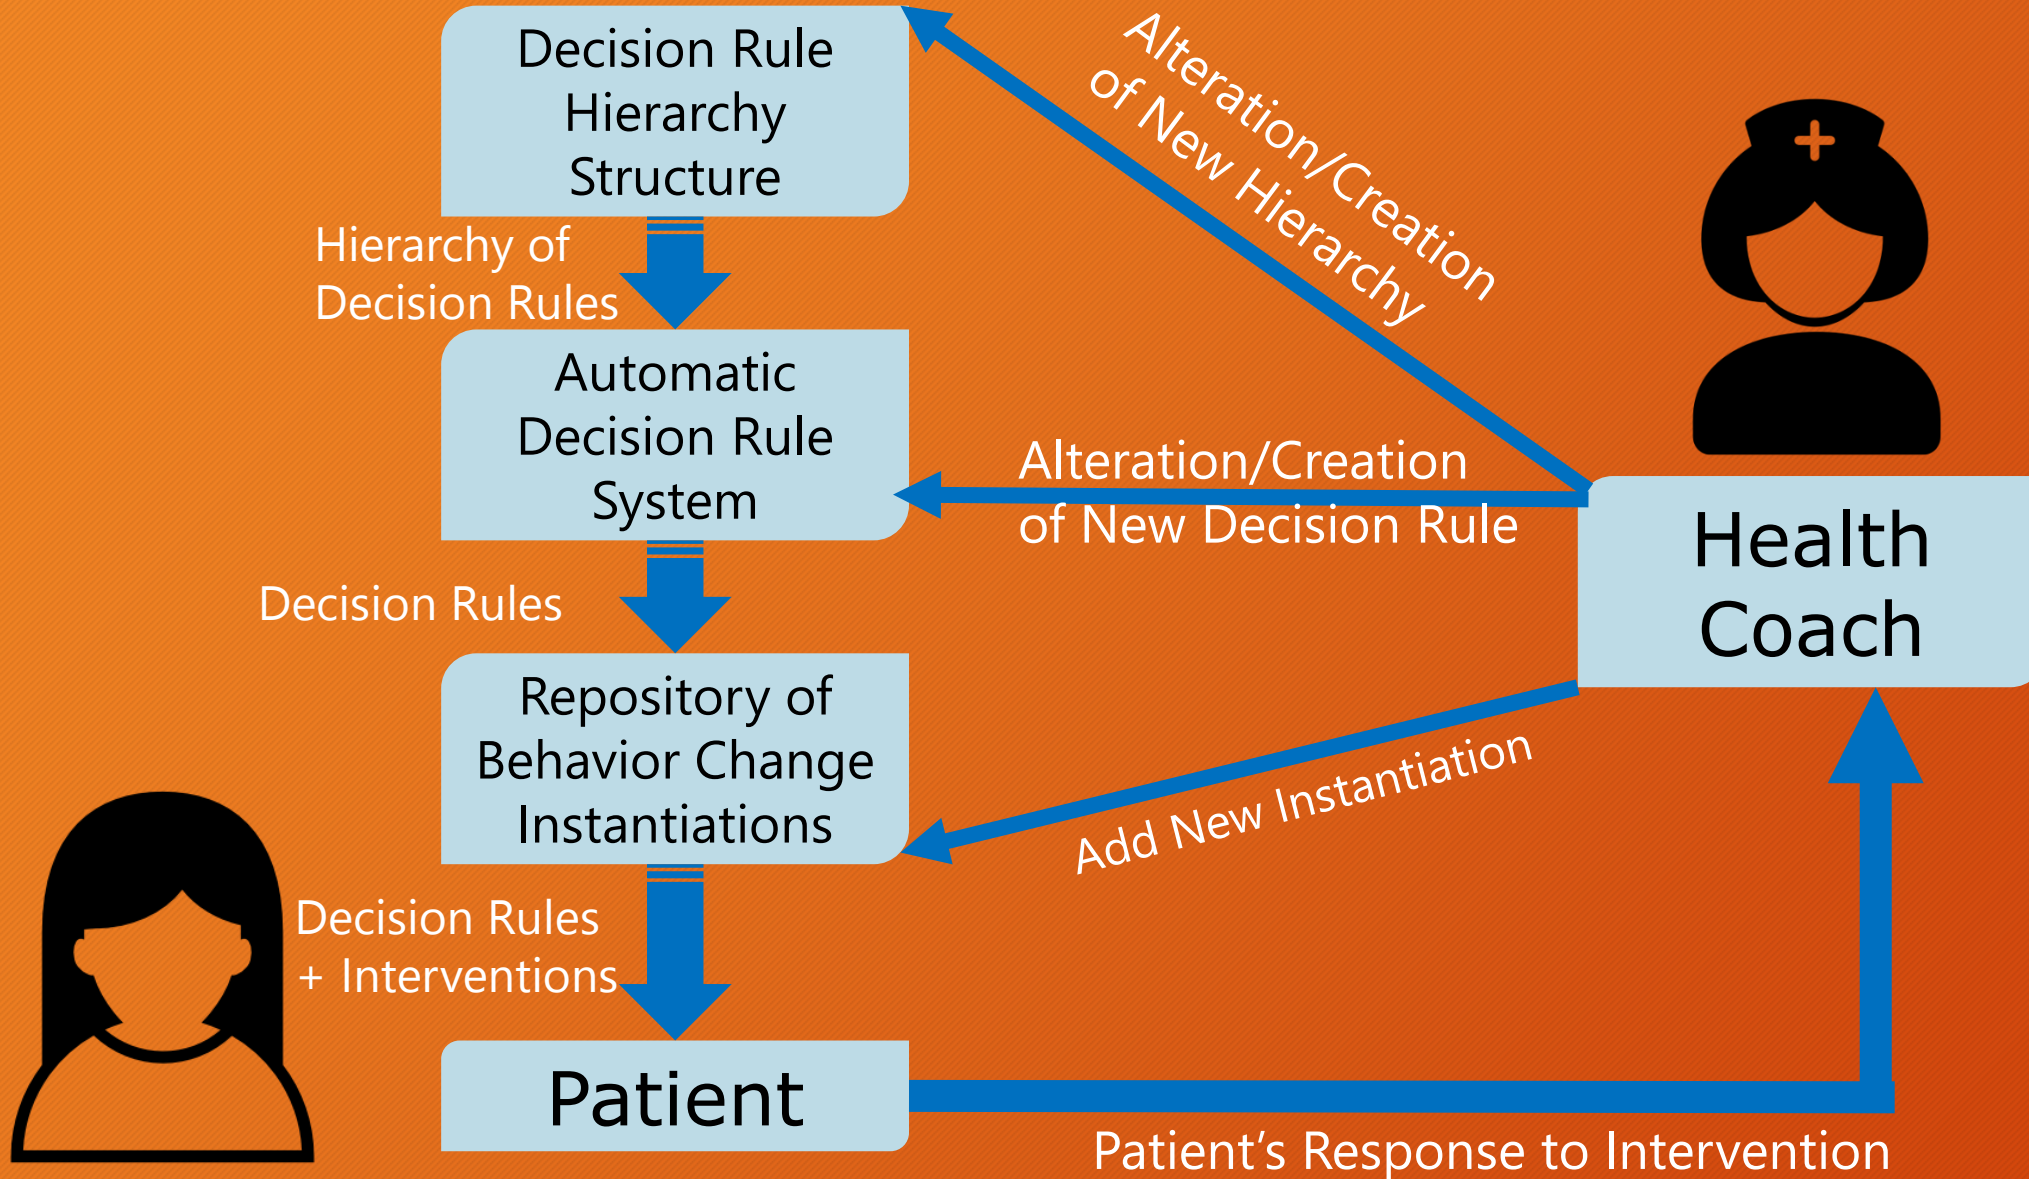

- Automated system with the help of health coach

Impromptu,
Personalized
Decision Rules

- Health coach only

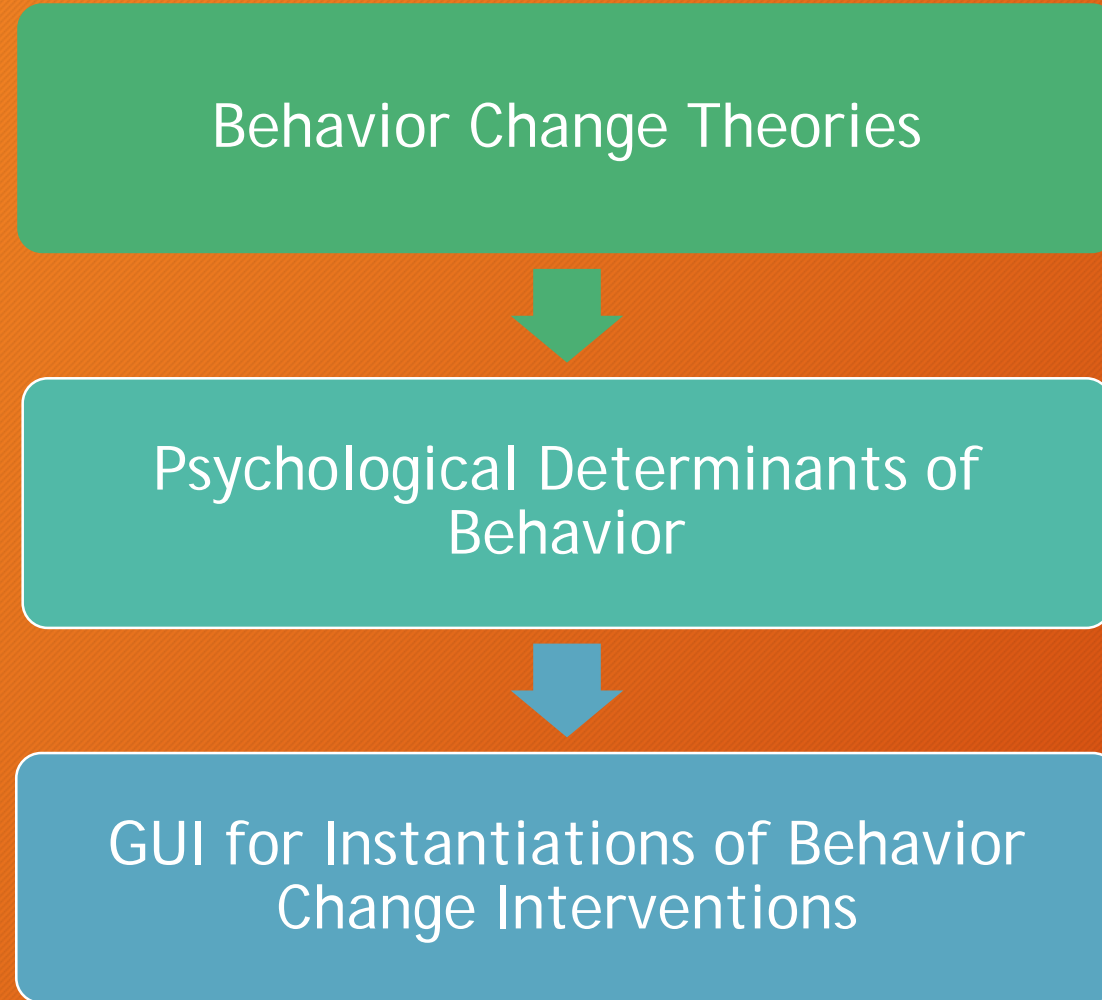

MyHeart: Automatic Decision Rule System

MyHeart:

Theory-Based Behavior Change Techniques (BCTs) and Interventions

Evaluation

Evaluation: Case Study

Test the high fidelity system prototype with the help of 6 CHD patents through a field trial spanning 12 weeks

Evaluation: Data

Pre-test Survey Data

.Physiological data

.Self-Efficacy for managing chronic disease

.Perceived stress scale

.Exercise confidence survey

.Eating behavior confidence survey

Patient Usage Log Data

.Physical activity goal

.Activity readiness

.Energy level

.Physical activity

.Heart rate

.EMA survey responses

.Viewing educational videos

Post-test Survey and Interview Data

.Physiological data

.Self-Efficacy for managing chronic disease

.Perceived stress scale

.Exercise confidence survey

.Eating behavior confidence survey

.Interview transcripts

Results

Survey : Physiological Attribute Scores

Difference between Post-test Score and Pre-test Score			
Patient	Waist (in cm)	Weight (in Kg)	Body Mass Index (BMI)
P1	-1.6	-1	-0.36731
P2	-1.27	-0.4	-0.13411
P3	-1.27	-0.74	-0.2799
P4	-1.3	-1.4	-0.54687
P5	-1.6	0	0
P6	-1.27	-0.9	-0.3875

Survey : Self-Efficacy for Managing Chronic Disease

[Lorig, K. R., Sobel, D. S., Ritter, P. L., Laurent, D., & Hobbs, M. , 2001]

Patient	Pre-Test Total Score [Lowest Score can be 6 and maximum score can be 60]	Post-Test Total Score [Lowest Score can be 6 and maximum score can be 60]
P1	38	46
P2	59	60
P3	48	32
P4	58	54
P5	47	53
P6	18	46
Mean	44.66	48.5
Standard Dev	13.87	8.82

Survey: Exercise Confidence Scores

[Sallis, J. F., Pinski, R. B., Grossman, R. M., Patterson, T. L., and Nader, P. R., 1988]

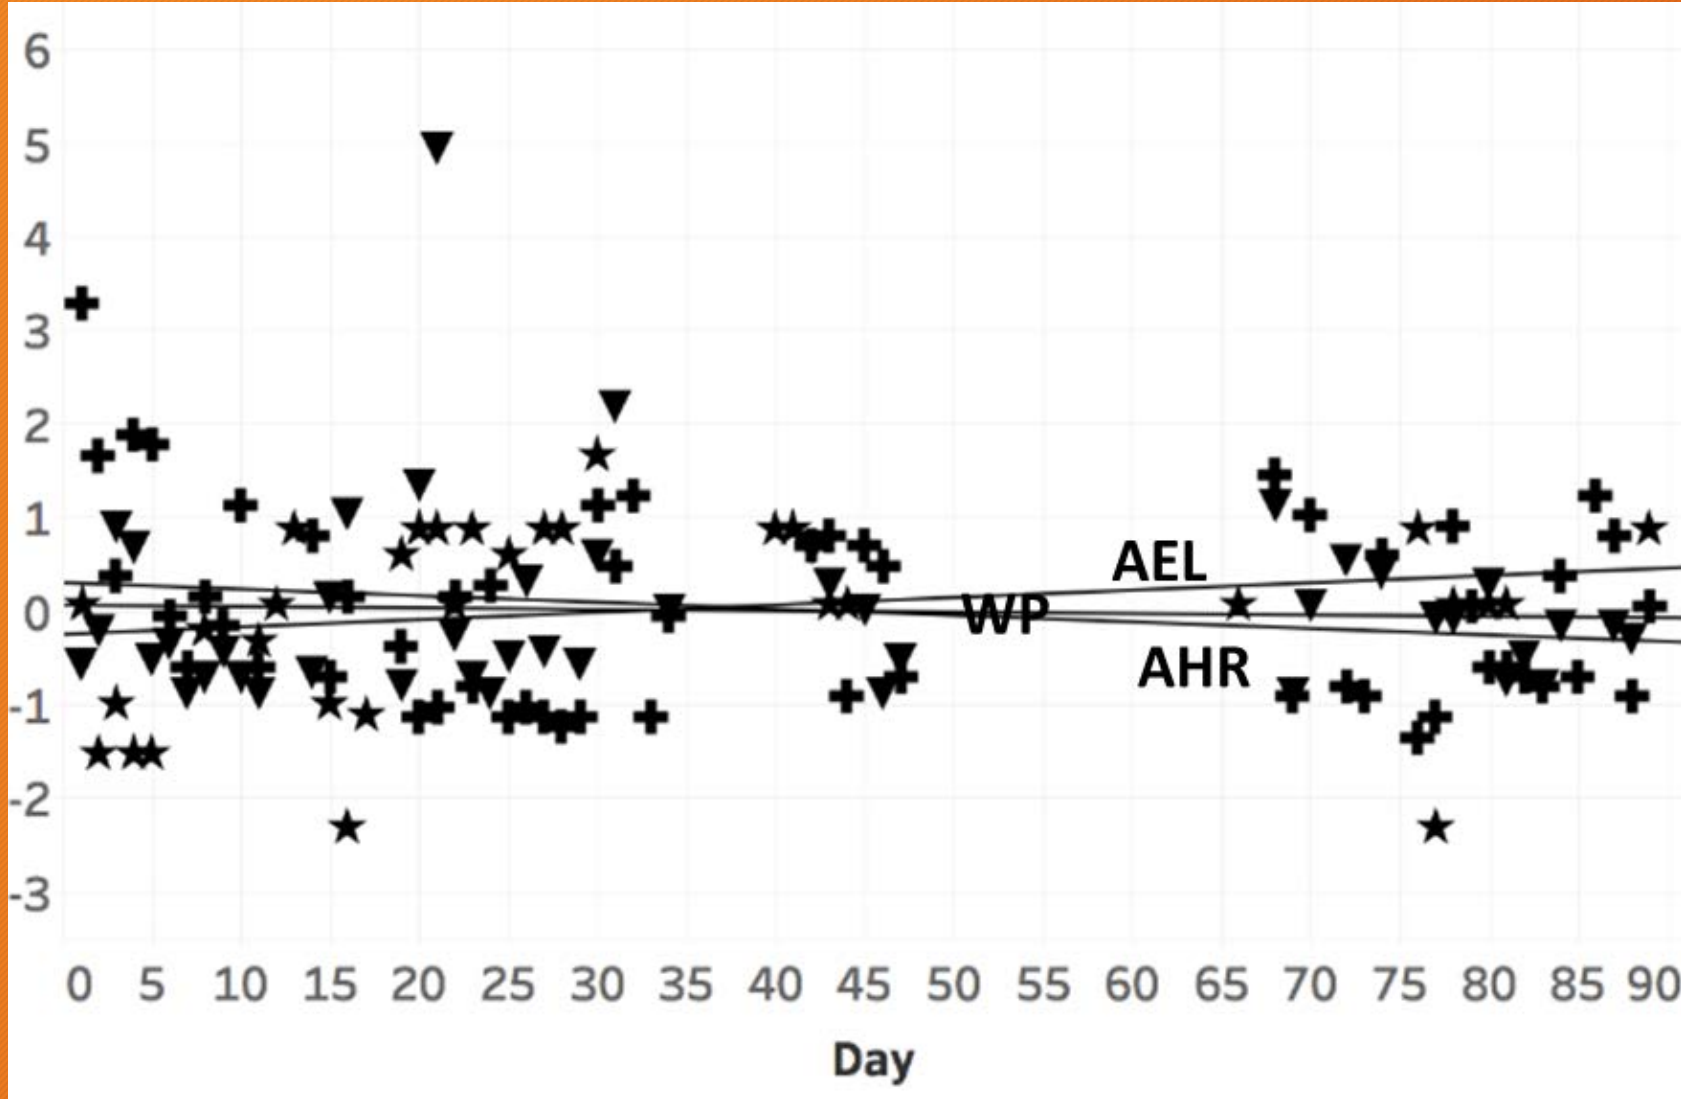

Patient	Total Score Pre-Test [Lowest Score can be 12-Highest score can be 60]	Total Score Post-Test [Lowest Score can be 12-Highest score can be 60]
P1	47	50
P2	54	55
P3	23	49
P4	59	58
P5	52	60
P6	30	44
Mean	44.16	52.66
Std Dev	13.13	5.52

Survey : Perceived Stress Scale

[Cohen and Williamson, 1998]

Patient	Total Score Pre-Test [Lowest Score can be 0 -Highest Score can be 40]	Total Score Post-Test [Lowest Score can be 0 -Highest Score can be 40]
P1	22	17
P2	22	20
P3	24	27
P4	23	18
P5	18	19
P6	18	21
Mean	21.16	20.33
Std. Dev	2.33	3.24

Results : Patient 1

(WP) Walk Performance

(AHR) Average Heart Rate

(AEL) Average Energy Level

Results : Patient 3

Patient4	33.55 (15.5) ↑	11 (9.34) ↑	1815 (1499.5) ↑	0.90 (0.74) ↑	2	22	14	18	5 ↑	1 ↓	12	20	4.5 ↑	6.33 (1.33) ↑	48 ↑	80.44 (11.7) ↓
Patient5	35.6 (11.93) ↑	45 (22.68) →	7226 (3628.3) →	3.61 (1.81) →	71	228	56	246	↑	9 ↓	164	138	4.05 →	2.48 (0.98) ↓	53 ↓	72.14 (4.5) ↓
Patient6	12.36 (3.79) ↑	8 (6.12) ↓	1293 (994) ↓	0.65 (0.49) ↓	21	20	21	20	13 ↑	5 ↓	10	31	3.73 ↓	4.72 (1.05) ↑	7 ↑	74.33 (6.0) ↓

Note: Black arrows represent the trend that is observed for each individual patients for different measures. We consider a trend as increasing or decreasing over the time only if the amount of increase or decrease is more than 10% of the average value of the measure for that individual patient.

Results : Design Lessons Learned

Patient Motivation

Random Motivational Messages after EMA responses help in adherence

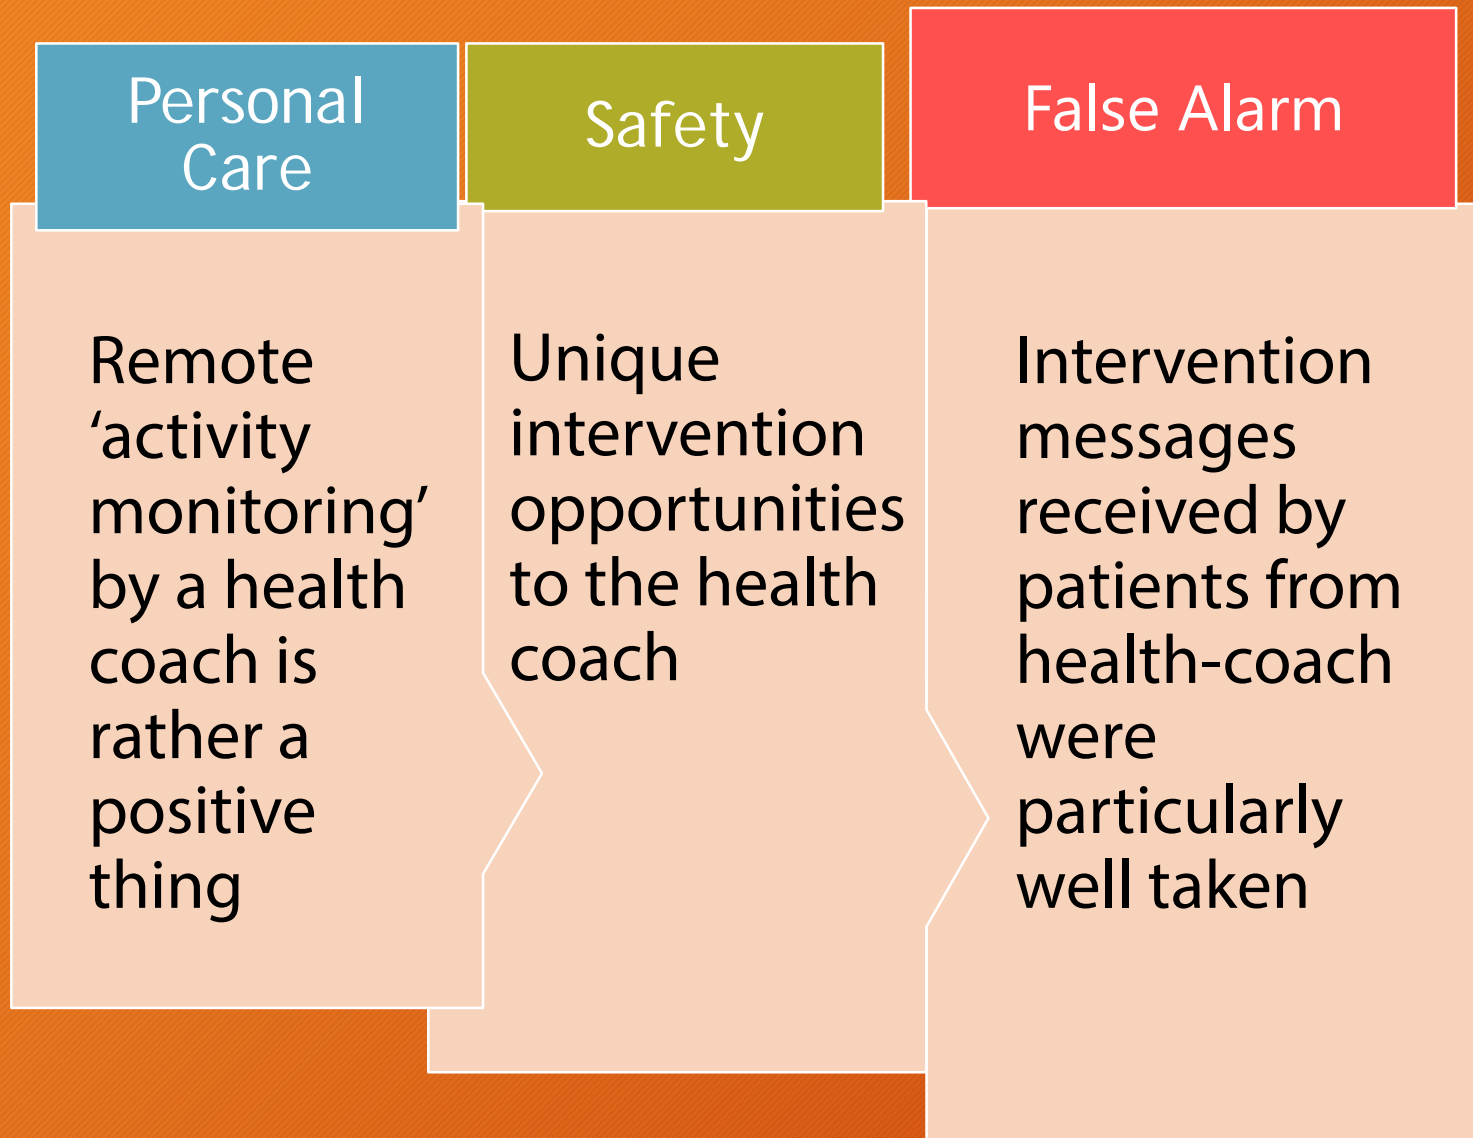

Patient Memory

Need daily reminder for setting up physical activity goal

System Usage

Health related incidence, poor battery life of the smart watch, travelling can reduce the usage of HBCR system

Results : Design Lessons Learned

Patient3: Daily Heart Beat Rate

Patient4: Daily Heart Beat Rate

Results : Design Lessons Learned

Complete redesigning of food selection section of the EMA survey

Have you eaten:

- Fruits
- Vegetables
- Whole Grains
- Healthy Protein
- One Drink
- None of the above

Submit

Have you eaten:

- Sweets and Sugary Drink
- Fried Food
- Salty Snacks
- Savory Drinks
- None of the above

Submit

In the last hour did you eat or drink anything?

NO

YES

Do you consider what you ate or drink:

Healthy Unhealthy

Submit

Food selection is not that explicit

Contribution

Contributions

describes the process for developing instantiations of sex-specific theory-guided behavior change interventions

provides insights regarding the design of an HBCR program augmented with a health coach's involvement

demonstrated the effectiveness of the HBCR system using a case study methodology

generated insights, based on which designed guidelines are prepared for designing future versions of HBCR system

Contributions

While 80% of health-related apps are abandoned after only two weeks of usage (Baldwin, 2017)

Our HBCR system performed fairly well during the field trial (usage of the system was completely voluntary)

Transformational Impacts: Agarwal and Lucas (2005)

provides new levels of customer service and convenience and enriches people's lives

alters cost structures and provides new opportunities for revenue

offers the opportunity to create new industries and innovative forms of business

What Next?

A
Micro-
Randomized
Trial

A
Large Scale
Clinical trial
with
Version 2.0

Thank You
